PROFILE

Data Analyst with four end-to-end analytics projects spanning retail, banking, HR, and supply chain, translating 180K+ record datasets into interactive Power BI dashboards and SQL-driven insights that support business decision-making. Strong in DAX, Python (Pandas), and Excel; co-authored a peer-reviewed ML research paper (93.6% model accuracy).

SKILLS

BI & Visualization: Power BI, DAX, Power Query, Streamlit, Excel Dashboards

Data & Databases: SQL (Joins, CTEs, Window Functions), MySQL, Data Cleaning, EDA

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), Advanced Excel

Tools: Git, GitHub, Microsoft 365 Copilot

PROJECTS

Retail Intelligence & Business Analytics Platform

Python · SQL · MySQL · Power BI · Streamlit · DAX

- Cut manual reporting effort by an estimated 70%, as measured by replacing recurring spreadsheet reports, by building a modular Python ETL pipeline feeding a MySQL analytical database with optimized queries, indexes, and stored procedures.
- Enabled self-service analysis across 8 business areas, as measured by 8 Streamlit modules (Sales, Customers, Inventory, Promotions, etc.), by designing and shipping a companion analytics app on top of the same dataset.
- Improved reporting reliability, as measured by automated data-quality checks and unit tests, by implementing audit procedures and query-performance optimization across the pipeline.

Banking Loan Analytics Dashboard

Python · SQL · Power BI · DAX

- Unified analysis of 307K+ customer records, as measured by a single analytical dataset with 150+ engineered features, by integrating customer, bureau, application, and installment data with Python.
- Surfaced loan portfolio risk and repayment trends, as measured by 35+ business-focused SQL queries, by analyzing customer risk, approval trends, and outstanding debt patterns.
- Delivered a 6-page decision-support dashboard, as measured by dynamic KPIs and drill-through navigation, by building DAX measures and cross-filtering views for lending and portfolio teams.

Supply Chain Analytics Dashboard

Power BI · SQL · Python

- Analyzed 180K+ supply chain records across sales, logistics, and geography, as measured by a 7-page interactive dashboard, by designing a star-schema data model with reusable DAX measures.
- Tracked delivery performance in real time, as measured by On-Time and Late Delivery % KPIs, by building map visuals, KPI cards, and conditional formatting into the report.
- Ensured data accuracy pre-visualization, as measured by validated, feature-engineered inputs, by cleaning and transforming data with Python (Pandas) and MySQL prior to Power BI load.

HR Analytics Dashboard

Python · Power BI · SQL · Excel · DAX

- Analyzed workforce trends across 3,000+ employee records, as measured by attrition, performance, and training metrics, by building an end-to-end Power BI and MySQL analytics solution.
- Identified key attrition drivers, as measured by 25+ custom DAX measures and drill-down views, by developing multi-page interactive dashboards with KPI cards.
- Enabled executive decision-making, as measured by workforce planning recommendations presented to stakeholders, by applying data storytelling techniques to the analysis.

EDUCATION

Bachelor of Technology, Computer Engineering

2022 – 2026

SSVPS's BSD College of Engineering, Dhule (DBATU) · CGPA: 7.6 / 10

CERTIFICATIONS

Power BI · Python Programming · SQL · Advanced Excel — Sevenmentors, 2026

RESEARCH & ACHIEVEMENTS

- Co-authored “Image-Based Food Classification and Nutritional Estimation Using MobileNetV2,” achieving 93.6% test accuracy across 101 food categories.
